

二 偏理論

1日目

ねじれ類入門

- 分裂射影文像と

広大区间の立場から -

榎本 悠久 (大阪公立大)

予定 (十一月一)

一日目

Part I. 分裂射影文像・被覆、
開半的有限性

Part II. (開半的有限) ねじれ類と
(T) 偏力群.

二日目

Part III. ねじれ類の(広大)区间, brick ルベル.

・ 分裂射影文像と
Hasse 矢の対応

Part IV. 変換の性質

Part 0. = これは何か？

- 私が 3 年前 <ら> は、ねじれ類 1 = 2112 動力学、(ながら) 身内で 発表 (た やみ + 「T-tilting for $m\mathbb{R}$ 」 のまとめ)
(名大・酒井氏・斎藤氏・東大の行田氏 = 感謝)
(「くつかけ」 [E-満井, ICE-closed ...])
共同研究 1 = もとづく
 - 内容：ねじれ類・T-頂理論 回りの
重要な論文たちの結果 を、
「自分が「わかる」やる、どうに」
解説 (たまご) (多く) 別証明を 給えたも。
- Tool
- 1. 分裂射影対象 [Auslander-Smalo, 1980]
 - 2. (左) 区向 [満井-Pfeifer, 2022]
- [Demonet-伊山-Reading-Reiten-Thomas²⁰²³] [E-満井, 2021]
- [足立-伊山-Reiten] , [Jasso]
 - [Demonet-伊山-Jasso] , [Smalo]
 - [Marks-Stovicek] , [満井] , ...

ねらい

- 多くの結果が、Tool を使、 $f = \text{分か}りや好い$ 解釈・証明が“あるべ”，あまり知れていなさうなへど布教 (たゞ)
- 加群圏の部分圏を調べる理論の入門。

注意

(知、ころ人向け)

- 「加群圏の部分圏」 \rightarrow 立場 (= EFFECT) 見方。半正方形 \rightarrow 三角圏、 \leftarrow \in (2-)Sifting の言葉は使わね。
- 多元環の表現論 \wedge \neq は仮定
(AR theory, AR quiver)
 - (傾加群, ねじれ類 は仮定 (たゞ))
tilting, torsion class
 - [ASS] \rightarrow また二つあるとよい良い
- 時間、関係の報告は後で、今省略。
- 簡単な証明は HW にて省略

Part I

I. 1. (1) 極端子, 及其

Recall

$\text{mod } A \ni P : \text{proj obj} \Leftrightarrow \text{Ext}(P)$

Proj Obj (1) $\text{Ext}_A^1(P, \text{mod } A) = 0$.

split Proj (1) $\forall M \rightarrow P : \text{surj} \wedge \text{split} \Rightarrow$
(retraction)

$\vdash \exists A \in \text{mod } A : \text{proj obj}$

(3) $\text{mod } A \subseteq \text{Fac } A_A$

cover ($\text{Fac } X := \{M \in \text{mod } A \mid \exists x \xrightarrow{\oplus} M\}$)

$\vdash \forall M \exists A \xrightarrow{\oplus} M$.

$\vdash \exists A$.

$P \otimes A \cong A, \text{mod } A \subseteq \text{Fac } P$

$\rightsquigarrow \text{add } P = \text{add } A$.

Def $P \in \text{mod } A$. (極端子)

(1) $P \in \mathcal{E} : \underline{(\text{Ext-})\text{proj obj}}$

$\Leftrightarrow \forall_{Y \in A} \text{Ext}_A^1(P, Y) = 0$

(2) $P \in \mathcal{C} : \underline{\text{split proj obj}}$ (分裂する
文法構造)

$$\Leftrightarrow \forall M \rightarrow P = \underbrace{\text{surj}}_{\mathcal{C}} \text{ "split."}$$

SP-proj

(3) $P(\mathcal{C}) := \{ \text{proj obj in } \mathcal{C} \}$

U1

$P_0(\mathcal{C}) := \{ \text{sp-proj obj in } \mathcal{C} \}$

if \mathcal{C} : extension-closed.

($\Leftrightarrow \mathcal{O} \rightarrow L \rightarrow M \rightarrow N \rightarrow \mathcal{O}$: EX,

$L, N \in \mathcal{C} \Rightarrow M \in \mathcal{C}$

HV

Res

\mathcal{C} の拡張性は実現可能!

Ex $P(\text{mod } A) = P_0(\text{mod } A) = \text{proj } A$

Ex $A = k(1 \leftarrow 2)$

modA:

$P(\mathcal{C}) = 1, 2$.

U+

$P_0(\mathcal{C}) = 1$.

($1 \rightarrow 2 : \text{surj } \mathcal{F}'$,
 $2 : \text{sp-proj } \Sigma^{\text{fin}}$)

Def $\mathcal{E} \subseteq \text{mod } A$, ext-closed. \mathcal{E} #.

(1) \mathcal{E} has enough proj

$\Leftrightarrow \forall c \in \mathcal{E}, \exists \text{ s.r.s.}$

$$0 \rightarrow c' \xrightarrow{\quad} P_0 \xrightarrow{\quad} c \rightarrow 0 : \text{ex} \\ \oplus \qquad \oplus \\ \mathcal{C} \qquad P(\mathcal{E})$$

(2) $P \in \mathcal{E}$: progenerator

$\Leftrightarrow \mathcal{E}$: enough proj \Rightarrow

$$P(\mathcal{E}) = \text{add } P.$$

Ex $(\mathcal{E} | < \infty \Rightarrow \mathcal{E}$: enough proj
(progen \Rightarrow)

Prop $\mathcal{E} \subseteq \text{mod } A$ si " kernel ext-closed"

(i.e., $\forall c_1, c_2 \in \mathcal{E} \quad \forall c, f: c_1 \rightarrow c_2$,
 $\text{Ker } f \in \mathcal{E}$)

たとえば. $P(\mathcal{E}) = P_0(\mathcal{E})$

∴ (\supseteq) OK

(\subseteq) $\forall P \in P(\mathcal{E}), c \xrightarrow{\pi} p : \text{surj.}$
 $\rightsquigarrow \text{Ker } \pi \in \mathcal{E}$

$$\sim 0 \rightarrow \ker \pi \rightarrow C \xrightarrow{\pi} P \rightarrow 0 : \text{ex}$$

π

\sim

$$\sim \overset{1}{A}(P, \ker \pi) = 0 \quad \text{if } \pi \text{ split}$$

$\therefore \pi$ is retraction. \square .

(Ex turf, wide $\mathcal{E}_{\mathcal{C}^{\perp}}$
 Kernel, ext-closed)

Fun Fact Hwy

$e \in \text{mod } A$, ext-closed, through proj \mathcal{E}^{\perp} .

$$P(e) = P(e) \Leftrightarrow e : \text{epi-ker } \pi^{\perp}$$

$\mathcal{E}^{\perp \perp}$

Ex

e : kernel,
 ext-closed.
 (wide)

$$D = P(e) = P(e).$$

$(1 \subset 2 \subset 3)$

Cover

Def $e \in \text{mod } A$ ($t > \gamma$)

(1) $M \in \mathcal{E}$: cover of e

: $\iff e \subseteq \text{Fac } M$

$\iff \forall C \in \mathcal{C}, \exists M^n \rightarrow C$

(2) $M \in \mathcal{C}$: minimal cover

\iff (i) $C \subseteq \text{Fac } M$

(ii) $N \oplus M, C \subseteq \text{Fac } N$

$\implies \text{add } N = \text{add } M$.

(\Rightarrow) If n 's indec & $1 \geq n'$

True cover \neq minimal!

Ex

(1) A_A is mod A a minimal cover.

(2)

min. cover = $P_0(C)$

Rem

M : C a cover

$\rightsquigarrow C$ a min. cover of M .

Q: unique?

Thm [Auslander-Smalo]

$C \subseteq \text{mod } A$: cover $M \notin C$, C .

$M \in \mathcal{C}$: min cover

$$\Leftrightarrow \text{add } M = \text{Po}(\mathcal{C})$$

(\Rightarrow) sp-proj. \Rightarrow $\text{Po}(\mathcal{C})$
 $= \text{min cover}$)

(\Leftarrow) Obs $M \in \mathcal{C}$: cover

$$\Rightarrow \text{Po}(\mathcal{C}) \subseteq \text{add } M$$

(\Leftarrow) If P : sp-proj. $\exists M^\oplus \xrightarrow{\sim} P$
 \rightarrow split.

(\Leftarrow) Obs f' OK.

(\Rightarrow) Obs f' $\text{add } M \geq \text{Po}(\mathcal{C})$

↳ (Exercise 11.17) basic

$$\therefore M = X \oplus Y \quad X : \text{indec.}$$

$$\not\in \text{Po}(\mathcal{C})$$

- X : not sp-proj. $\therefore \not\in \text{Po}(\mathcal{C}) \rightarrow X$: ^{not} retr

$$X^\alpha \oplus Y^\beta$$

φ : surj.
 not retr

$$\varphi: X^n \xrightarrow{[f_1, \dots, f_n]} X \quad : \text{surj.}$$

\oplus

$$Y^n \xrightarrow{g} \quad : \text{index } \hookrightarrow \text{concrete}$$

$$f_i: X \rightarrow X : \text{rad} \quad \varphi: \text{radical.}$$

\Downarrow

$$\rightsquigarrow X \not\in T \subseteq \text{End}_e(X) - \text{mod } \text{rad} \text{End}_e(X),$$

$$X = (\text{rad End}_e(X)) \cdot X$$

$$+ \sum \{ \text{Im } h \mid Y \rightarrow X \}$$

$$\rightsquigarrow \text{defn } \exists! \quad X = \sum \{ \quad \},$$

$$\rightsquigarrow \text{if } \overbrace{Y^n \rightarrow X}^{\text{surj.}}$$

$$\rightsquigarrow Y \text{ dir. & cover } \exists$$

$$(Y^n \oplus Y^2) \rightarrow X^n \oplus Y^2 \rightarrow C \quad \begin{matrix} \hookrightarrow \\ \text{maximal } \\ \text{reg.} \end{matrix}$$

Res cover $\exists \text{reg.}, \exists \text{irreg.}$!

($|e| < \infty \Rightarrow e: \text{cover } \exists$)

$|e| = \infty \Leftarrow$

I. 2. 索引函數的定義

Def

$$e \in \text{mod } A \ni X$$

$$(1) X \xrightarrow{f} C^X : \text{left } e\text{-approximation}$$

\vdash

preprj

proj

e

COVER & FIN.

$\text{P}(e) = D$
